

TALKING POINTS

Health Care Systems Research Network (HCSRN)

Our mission is to improve health and health care for our members and their communities through research that connects the resources and capabilities of learning health care systems.

HCSRN, formerly known as the HMORN, brings together the non-proprietary, public-interest research departments of 19 non-profit health systems collectively serving more than 28.4 million individual patients in the U.S. and Israel.

The foremost source of population-based research improving health and health care

- **We conduct public-domain research in real-world settings.**
Our organizations work together to create a network of learning health care systems where innovation and improving care are top priorities.
- **Our scientific and research staff is more than 1,900 members strong - and growing.**
Our scientists have expertise in health services, behavioral science, epidemiology, biostatistics, economics, and many other fields.
- **We are an integral part of the U.S. research enterprise** thanks to longstanding partnerships with federal funders, universities, other major research organizations, and through leadership in important national initiatives, such as the FDA Sentinel, NIH Collaboratory, and PCORnet.
- **We are national leaders in scientific collaboration.**
The HCSRN's 19 sites give scientists access to vast data resources, population diversity, and statistical power. We are a national model for collaboration and research efficiency.
